22. Juliette deposits \$2500 into a bank account where the balance of the account b(t) after t years can be represented by  $b(t) = 2500(1.075)^t$ . To the nearest tenth of a year, how long will it take for Juliette's money to reach \$4000?

23. Empanadas are taken out of an oven when they reached a temperature of 168°F and put on the kitchen table at room temperature (68°F). After 8 minutes, the temperature of the empanadas is 125°F. The temperature of a cooled object can be given by the formula below:

$$T = T_a + \left(T_0 - T_a\right)e^{-kt}$$

T = the temperature of the object after *t* minutes

t = time in minutes

 $T_a$  = the surrounding temperature

 $T_0$  = the initial temperature of the object

The function  $Z(t) = 22151.327(0.778)^t$ , where Z(t) is measured in dollars, and *t* is the time in years, models the unpaid amount of Zach's loan over time. Graph V(t) and Z(t) over the interval  $0 \le t \le 5$ , on the set of axes below.

State when V(t) = Z(t), to the *nearest hundredth*, and interpret its meaning in the context of the problem. Zach will cancel the collision policy when the value of his car equals \$3000. To the *nearest tenth of a year*, how long will it take Zach to cancel this policy? Justify your answer.
